

D=INE.IO
by DIFFERENCE

STRICTLY CONFIDENTIAL
CLIENT MONITORING
REMOTE

What is the difference?

dFine.IO by DIFFERENCE is a remote client monitoring solution for directors, agencies, freelancers and clients. It is an ultra-low latency streaming, which brings the highest quality and color accurate pictures to the web in real-time.

Remote video collaboration has become more important for content creators than ever and remote work has never been easier. Moreover cost-effective workflows are frequently requested by the clients. Clients can stay at the home office or at the agency, while the monitor's content is streaming to the web viewer portal.

That's why we invented a high value and **strictly confidential streaming** solution for our clients, who attaches great importance to **security and user access controls** for online approval sessions.

For more information or access requests for an upcoming project, or trial version please contact us at:

SSL Secure Ingesting

Color Grading, Editing, Screening

DFINE.IO

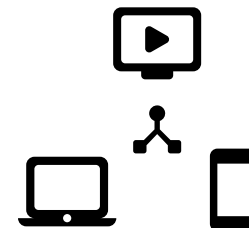

SSL Streaming Server

Based in
Germany

 1 - 2 sec latency

Confidential Front-End
with Access Control for
Client Monitoring

How Does It Work?

dFine.IO is located in Germany. We focus on the German market. All endpoints and ingest servers are securely encrypted via SSL. Our administration backend features strictly confidential settings for the web viewer portal. You can manage access restrictions per Stream, time range restrictions, viewer controls and more.

Features

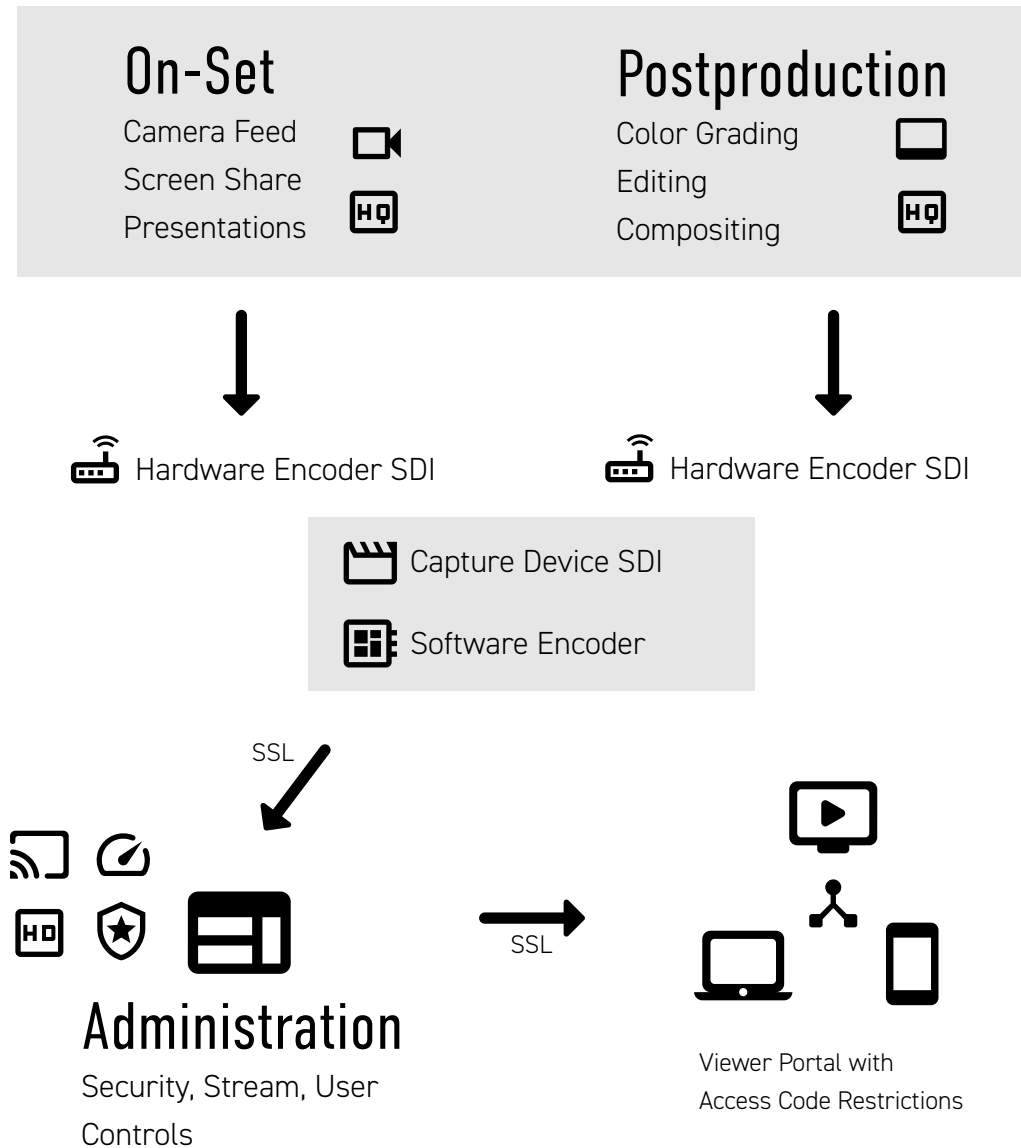

Administration
